## Biographical sketch

Dr. Ver Steeg's research explores *practical methods for inferring meaningful structure in complex systems*. This work draws on a diverse set of connections between machine learning, information theory, causal inference, and physics. His recent work has applied these tools to solving outstanding problems in diverse domains including biology, natural language, and human behavior.

## Education

Ph.D., California Institute of Technology 2009  
Field: Physics, Area: Quantum Information and Computation  
Advisor: John Preskill, Feynman Professor of Theoretical Physics

B.S., Drake University 2003  
Majors: Physics, Mathematics, Philosophy

## Experience

University of Southern California  
Research Associate Professor 2019 - Present  
Senior Research Lead 2018 - Present  
Research Assistant Professor 2013 - 2019  
Research Lead 2015 - 2018  
Computer scientist 2011 - 2015  
Postdoctoral researcher 2009 - 2011

Amazon  
Visiting Academic 2021 - Present

ZEFR  
Scientific advisor 2019 - 2021

California Institute of Technology 2003-2009  
Graduate research

Summer internships  
Google Inc., Machine translation 2009  
Brookhaven National Laboratory, Nuclear physics 2002  
Los Alamos National Laboratory, Nuclear physics 2001

Drake University 2001-2003  
Computational atomic physics research

## Recent Sponsored Research

## Teaching

CSCI-699 (Advanced Special Topics): Dynamics of Representation Learning, USC      Spring 2022

Designed a new course looking at different aspects of learning (optimization dynamics, models defined via dynamics, distribution shift) using tools from classical physics and non-equilibrium thermodynamics. Draft syllabus available at <https://sites.google.com/view/699dynamicsofrep/home>.

CSCI-699 (Advanced Special Topics): Representation Learning: Theory and Practice, USC      Fall 2019

Designed and taught with Aram Galstyan and Sami Abu-El-Haija a course focusing on principles and practical aspects behind successful deep learning. Over 50 PhD students took the class. 44/45 student evaluations rated my teaching as “excellent” (the highest score). Syllabus available at <http://sami.haija.org/cs699/>.

CSCI-590: Directed research, USC      2014- Present

CSCI-599: Physics and Computation, USC      Spring 2012

Designed and taught with Aram Galstyan. Studied connections between theoretical computer science and machine learning, statistical physics of disordered systems, and information theory. Main text was Mezard and Montanari, “Information, Physics, and Computation”. First course to ever program and run a quantum annealing computer for a course project (USC was the first university to purchase a D-Wave computer). Two class projects led to publications.

T.A. Physics 2, California Institute of Technology      2008

Note: these papers span different disciplines including physics, computer science, and biology. Listed are all peer-reviewed publications including journal articles and conference proceedings. In physics, conferences typically do not have papers (only abstracts, not included here). Peer reviewed conference proceedings in CS and biology are included. In CS, conference proceedings are, depending on the conference, highly selective and considered top venues in the field (e.g., NeurIPS/NIPS, ICML, WWW). Journals in CS are typically used for longer version of work appearing originally in conferences. In neuroscience, conference papers are peer reviewed, but they are short and generally regarded as second tier publications mainly used for work in progress.

ID Analytics, "Information-Theoretic Tools for Social Media"	2013

Santa Fe Institute, workshop on “Structure, Statistical Inference and Dynamics in Networks”	2013
Sante Fe Institute, “Information-Theoretic Tools for Social Media”	2012
Keynote for “Making Sense of Microposts” workshop at WWW 2012.	2012
SAP Research, Singapore	2012
LARC, Singapore Management University seminar.	2012
UC Irvine, AI-ML seminar.	2012

\* *Talks with honorarium*
